

Monthly Planning Clarification Questions

We are finalizing the Monthly Planning (MPRS) process. A few business decisions are required before we proceed further.

1. Monthly Planning Freeze / Cutoff Date

Customers send RS/schedule updates daily.

For Monthly Planning, on which date do you normally finalize the next month's production requirement?

Examples:

- 25th of current month
- Last working day of current month
- 1st day of month
- No fixed date (planning revised whenever required)

2. Monthly Planning Demand Source

Currently MPRS is based on:

- NO_QTY Requirement Sheets (RS)
- Carry Forward
- Green Level Requirement

Question:

Should Monthly Planning also include Regular Sales Orders (NORMAL SO)?

Example:

Monthly Requirement =
Regular SO Demand

- NO_QTY RS Demand
- Carry Forward
- Green Level Requirement

OR

Should Regular SO continue to be managed separately through the existing SO → WO → RM planning process?

3. After Monthly Plan Is Locked

Suppose July Monthly Plan is locked.

After that, customer sends a new RS update.

What should happen?

- A. Ignore until next revision is created
- B. Revision is mandatory
- C. Store department decides whether revision is required

4. Monthly Plan Revision Process

Example:

Revision 1

Cap = 10,000

Nozzle = 10,000

Later:

Revision 2

Cap = 12,000

Nozzle = 8,000

Question:

Should all revisions remain visible permanently for audit/history?

5. Procurement Planning

When Monthly Plan Revision 2 replaces Revision 1:

Should procurement work on:

A. Latest revision only

OR

B. Difference (delta) between previous released revision and latest revision?

Example:

Revision 1 RM Requirement = 100 kg

Revision 2 RM Requirement = 120 kg

Should Purchase receive:

- 120 kg total
- OR
- Additional 20 kg only?

6. Green Level Planning

Current understanding:

Green Level is a recommendation.

Store may plan lower or higher quantity than suggested.

Example:

Suggested Production = 11,750

Store Planned Qty = 10,000

ERP will show remaining Green Gap but will not force production.

Please confirm whether this understanding is correct.
