

One concern before approval

Client wants both:

STORE

and

PURCHASE

to have:

- Create/Edit/Delete Users
- Create Masters
- Correct Data

I would recommend discussing this once more.

In most ERP systems, those permissions belong only to:

ADMIN

Otherwise data governance becomes difficult.

My recommendation would be:

ADMIN

→ User Management

→ Master Control

STORE

→ Operational Masters (if required)

PURCHASE

→ No user management

Everything else looks reasonable and aligns well with a manufacturing company structure.
