

Recommended Final Roles

1. Admin

Purpose: System owner

Access:

- All masters
- All transactions
- User management
- Settings
- Reports
- Tally integration
- Override permissions
- Audit logs

Can:

- Create/Edit/Delete users
- Correct data
- Reverse transactions (where allowed)

2. Sales User - Merge the Sales user with Admin user, as we don't have a separate sales department.

Department: Sales

Owns:

Enquiry Feasibility Quotation Sales Order Customer Follow-up Customer Tracking

Cannot:

RM Procurement Material Issue Production QA Dispatch Stock Adjustment

3. Store User

Department: Store

Owns:

RM Control Center Material Availability Allocation Material Issue RM Return Stock Overview
RM Ledger Stock Movement Stock Adjustment

Can:

Validate RM shortages Allocate stock Issue RM Raise procurement requirement Receive RM readiness status

Cannot:

Create WO Production Entry QA Dispatch Sales

** The Stores shall also have the following rights –*

Authority to create Masters, Access to all kinds of reports related to stock(RM,WIP,FG); dispatch; job-work; quantity; cost; revenue; schedules & orders; production; create/ delete/ edit users, correct data.

** Merge the Dispatch user with the Stores user, as both the things are handled by stores department & same person.*

**Job-work module to be added in the stores.*

4. Production User

***Production user & QA user to be separated.**

***QA reports – Monthly rejection analysis report, top contributors to the rejections, Scrap note generation (status & report), cost wise rejection analysis.**

***Production reports – Plan VS actual, OEE report.**

Department: Production + QA

This becomes:

Production Department (Including QA)

Owns:

Work Order Production Workspace Production Entry QA Entry Production QA QC Report

Can:

Create WO Record Production Record QA Approve/Reject Production Rework decisions QC

Hold decisions

Cannot:

RM Procurement Stock Adjustment Sales Dispatch.

5. Purchase User (NEW)

Department: Purchase

This role is currently missing and causing confusion.

Owns:

Procurement Workspace Purchase Planning RM Purchase Order GRN Follow-up Vendor

Follow-up Purchase Bills

Can:

Prepare RM PO Send PO Track Supplier Follow-up GRN Create Purchase Bill

Cannot:

Allocate RM Issue RM Create WO Production Dispatch

Store raises requirement.

Purchase executes procurement.

Exactly as real manufacturing companies work.

*** The Purchase shall also have the following rights –**

Authority to create Masters, Access to all kinds of reports related to RM (purchase qty, schedule, MOQ, status); BOP/ BOM (purchase qty, schedule, MOQ, status); create/ delete/ edit users, correct data.

6. Dispatch User - * Merge the Dispatch user with the Stores user, as both the things are handled by stores department & same person.

Department: Dispatch

Owns:

Dispatch Workspace Sales Bills Customer Returns FG Dispatch

Can:

Dispatch FG Generate Dispatch Note Create Sales Bill Process Returns

Cannot:

Production Procurement Material Issue WO

What to do with Existing QC User?

Since you have already decided:

QC → merged into Production Department – Request if you could separate the roles. It would be easier to handle the entries at our end.*

I would NOT delete the role.

Instead:

Rename

QC ↓ QA_SUPERVISOR

or

PRODUCTION_QA

Usage

Most companies eventually want:

Production Operator QA Inspector Production Manager

Even if today one person does both.

So keep the role in the database.

Just hide it from login creation for now.

Final Recommended ERP Structure

ADMIN SALES STORE PURCHASE PRODUCTION

DISPATCH This is the structure I would freeze before further testing because it matches the ownership model we finalized:

Sales → creates demand Store → controls material Purchase → buys material Production →
WO + Production + QA Dispatch → ships FG + billing Admin → controls system
